DETAILED ACTION

Claims 6-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 06/09/08.

Applicant elects group I, claims 1-5, with species $-B(OH)_2$ for V1 and Br for V2 is acknowledged. In the case of said species are in condition for allowance, then the search is further expanded to non-elected species in claims 1-5.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang et al or Xia et al, both of record on 1449.

Wang discloses a method for producing a dendrimer having the claimed formula (see Abstract; Figures 1-2; col. 8, claims) by way of an AB₂ type of polymerization, as in the claims.

Note that the mechanism to form the product are disclosed in Example 2 by coupling reaction.

The Xia reference discloses in Scheme 1 the synthetic route for the thiophene dendrons in that 2,3-dibromothiophene acts as AB₂ type monomer, as in the claims.

Art Unit: 1796

The reference further discloses the BuLi/CuCl₂ coupling to thiophene dendrimers in Scheme 2 and another route to synthesis of thiophene dendrimers in Scheme 3.

The disclosures of the references differ from the instant claim in that they do not disclose the active group V1, as in the claims. However, said active group does not appear in the final product. Therefore, it would have been obvious to one of ordinary skill in the art, based on the same mechanism, using the same coupling reaction, to modify the reactants to have the intermediate product (b) having the active group V1, since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said modification.
